

Jonathan Diaz

IT MANAGER | SENIOR SYSTEMS ADMINISTRATOR | MICROSOFT 365 | AZURE | INFRASTRUCTURE

Miami, FL | 786-400-5936 | Diazjonathan6421@gmail.com | LinkedIn | Portfolio | GitHub Homelab

PROFESSIONAL SUMMARY

Hands-on IT manager and senior systems administrator with 4+ years of experience owning internal IT operations for a 65-user CPA firm. Administers Microsoft 365, Entra ID, Active Directory, Azure Virtual Desktop, Windows Server, endpoint security, remote access, and business-critical applications. Combines escalation-level troubleshooting with infrastructure modernization, MSP/vendor governance, lifecycle control, documentation, and practical risk management.

CORE COMPETENCIES

Microsoft & Identity	Microsoft 365 E3, Exchange Online, Teams, SharePoint, OneDrive, Entra ID, Active Directory, MFA, Conditional Access, Group Policy
Cloud, Systems & Endpoint	Azure, Azure Virtual Desktop, Windows Server, Windows 10/11, workstation imaging, endpoint lifecycle, patch coordination, Synology storage, Veeam
Network & Security	DNS, DHCP, VPN, Meraki, Cisco and Fortinet fundamentals, switching, firewalls, BitLocker, SentinelOne, Barracuda, Mimecast
Operations & Applications	PowerShell, MSP/vendor governance, asset and license control, CCH Axxess, ProSystem fx Engagement, QuickBooks Enterprise, Right Networks, Karbon, Box

PROFESSIONAL EXPERIENCE

HLB Gravier LLP | Information Technology Manager | Miami, FL | April 2022 - Present

- Own day-to-day internal IT operations as the sole internal technology resource for approximately 65 users, serving as the primary technical contact for leadership, staff, the MSP, application providers, and infrastructure vendors.
- Administer Microsoft 365, Exchange Online, Entra ID, Active Directory, Azure Virtual Desktop, Windows Server, DNS/DHCP, VPN access, shared mailboxes, permissions, endpoint security, and file access controls.
- Manage the complete user and device lifecycle, including onboarding/offboarding, MFA and Conditional Access, licensing, workstation provisioning, imaging, patch coordination, procurement, hardware support, and asset retirement.
- Lead infrastructure and application initiatives by converting business requirements into technical scope, assignments, testing, implementation plans, user communications, documentation, and follow-through.
- Direct and validate work performed by CompassMSP, Microsoft, Wolters Kluwer/CCH, Barracuda, Right Networks, telecom, cabling, access-control, and hardware vendors.
- Provide escalation support across identity, desktop, server, network, printing, remote access, security, and accounting applications while maintaining system documentation, inventories, renewal records, and implementation notes.
- Support security and compliance reviews by documenting MFA, Conditional Access, encryption, endpoint protection, firewall, incident-response, retention, and data-protection controls.

SELECTED IMPACT HIGHLIGHTS

- Restored a user from a week-long Zscaler-related outage in under 20 minutes after escalation, then supported retirement of the redundant platform.
- Coordinated migration of approximately 1.5 TB of historical email archive data from Mimecast to Barracuda while preserving user access.
- Performed discovery and migration planning for a 3.4 TB Box environment, including permissions, retention, CCH dependencies, SharePoint, and Karbon workflows.
- Identified 539 stale device records, 177 ownerless groups, and 216 groups without sensitivity labels during Azure and Microsoft 365 environment review.

SELECTED PROJECTS & OUTCOMES

- Azure Virtual Desktop & Hosted Application Consolidation:** Reviewed QuickBooks, payroll, hosted-access, and remote-user requirements; coordinated re-hosting through Azure Virtual Desktop, access cleanup, and retirement of redundant services. Simplified remote access and reduced recurring licensing and hosting overhead.
- Box-to-SharePoint / Karbon Transition:** Performed discovery across a 3.4 TB Box environment, mapped permissions and workflow dependencies, created phased cleanup and migration plans, and aligned SharePoint, Karbon, CCH synchronization, retention, and legacy-platform retirement.
- Azure & Legacy Infrastructure Retirement:** Tracked workload dependencies, validated access, and coordinated retirement of aging Nutanix-hosted systems, servers, storage, firewalls, fax equipment, endpoints, and related assets as services moved toward more supportable platforms.
- Email Security & Archive Migration:** Coordinated migration of approximately 1.5 TB of historical archive data from Mimecast to Barracuda, monitored completion, prepared user guidance, and preserved access while enabling retirement of the prior platform.
- Windows 11 / CCH Risk Management:** Built readiness inventories, coordinated rollout planning, monitored CCH Engagement and Excel workpaper compatibility, and supported pauses or rollbacks when updates created deadline-sensitive production risk.
- Cloud Voice & Office Modernization:** Helped replace legacy Avaya telephony with AT&T Office@Hand, coordinating user devices, conference-room phones, receptionist workflows, hybrid support, office-move technology, and cabling.
- Security & Physical Access Controls:** Maintained MFA, Conditional Access, BitLocker, SentinelOne, email security, and access restrictions; diagnosed an incompatible Kantech/ioProx badge format and converted the issue into a scoped three-reader replacement project.
- High-Impact Incident Resolution:** Restored a user from a week-long Zscaler-related outage in under 20 minutes after escalation and helped retire the redundant platform; separately isolated Azure Virtual Desktop failures to stale host/broker assignment rather than user-network changes.

TECHNICAL PROJECT - HOMELAB ENGINEERING

Designed and documented a production-minded self-hosted lab using Proxmox VE, Ubuntu, Docker Compose, Synology NFS, Pi-hole, Portainer, MeshCentral, and Uptime Kuma. Built Bash preflight checks to prevent containers from writing to local disk when NFS storage is unavailable, added health checks and SHA-256-verified configuration backups, and used GitHub Actions to validate shell syntax and Docker Compose.

LEADERSHIP & OPERATIONAL STRENGTHS

MSP & Vendor Governance Work assignment, escalation, requirements definition, service validation, change coordination, proposal comparison, and leadership communication.	Documentation & Control System records, inventories, renewals, onboarding/offboarding procedures, implementation notes, project tracking, and user guidance.
Support & Communication Executive support, internal helpdesk ownership, remote-user support, outage communication, training, and technical risk translation.	Administration & Automation PowerShell and command-line troubleshooting, Microsoft admin centers, Netwrix, Goverlan, ManageEngine, SolarWinds, and vendor portals.

EDUCATION

- B.S. in Information Technology** - Florida International University, Miami, FL | 2021
- A.A. in Computer Management** - Miami Dade College, Miami, FL | 2019
