

JONATHAN DIAZ

SENIOR SYSTEMS ADMINISTRATOR | WINDOWS SERVER | AZURE | MICROSOFT 365

Miami, FL | 786-400-5936 | diazjonathan6421@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub Homelab](#)

PROFESSIONAL SUMMARY

Senior hands-on infrastructure administrator with 4+ years of experience engineering and supporting hybrid Microsoft environments for 75 active users across the United States and India. Owns Windows Server, Active Directory, Microsoft Entra ID, Azure infrastructure, Azure Virtual Desktop, Microsoft 365, networking, backup, and endpoint security. Builds and migrates production systems, resolves escalated incidents, and modernizes infrastructure while coordinating MSP implementation and support.

CORE COMPETENCIES & TECHNICAL SKILLS

Windows Server & Identity: Windows Server 2019/2022, AD DS, Active Directory, Microsoft Entra ID, Group Policy, DNS, DHCP, IIS, SMB file services, RDP, certificates, service accounts, replication, FSMO roles, trusts

Azure & Virtualization: Azure VMs, Azure Virtual Desktop, host pools, workspaces, application groups, VNets, subnets, NSGs, Recovery Services Vault, Azure Monitor, Log Analytics, VM Insights, Network Watcher, Activity Log, Hyper-V, Nutanix Prism Central/Element

Microsoft 365 & Security: Microsoft 365 E3, Exchange Online, Conditional Access, MFA, Purview eDiscovery Standard, Content Search, retention, mailbox holds, SentinelOne, BitLocker, Barracuda

Networking & Infrastructure: Meraki firewalls, Cisco switching, VLANs, trunks, spanning tree, port security, PoE, VPN, Wi-Fi, RADIUS, SecureW2, Cisco Firepower, storage, patching, Veeam, disaster recovery

Automation & Operations: PowerShell, logon scripts, Goverlan, ManageEngine Endpoint Central, Wireshark, IT Glue, monitoring, troubleshooting, documentation, MSP/vendor coordination

PROFESSIONAL EXPERIENCE

HLB Gravier LLP | IT Manager (2026 - Present) | Miami, FL | January 2022 - Present

Earlier roles: Systems Administrator (2025 - 2026) | IT Specialist (2023 - 2024) | IT Support (2022 - 2023)

- Own day-to-day infrastructure operations for 75 active users across the United States and India, supporting approximately 75 Windows laptops, 15 servers, five printers, five Apple TV devices, and three conference-room systems; serve as the primary escalation point for major incidents.
- Administer approximately 15 Azure VMs - five AVD session hosts, seven application servers, two domain controllers, and one file server - spanning compute, storage, VNets, subnets, NSGs, domain integration, monitoring, backups, application deployment, and resource optimization.
- Administer Windows Server 2019/2022, Active Directory, DNS, DHCP, Group Policy, file services, IIS, certificates, service accounts, patching, and server troubleshooting; manage FSMO roles, replication, DNS zones, Sites and Services, trusts, and AD health checks.
- Built and migrated seven production workloads to Azure, retired seven legacy VMs, and replaced one platform with SaaS; executed implementation and cutover before transitioning designated resources to MSP support.
- Eliminated approximately \$128,400 in annual recurring technology costs by validating dependencies, migrating workloads, and retiring Zscaler, Nutanix, Right Networks, and Duo.
- Administer Microsoft 365 E3 and Exchange Online for approximately 75 users, including transport rules, anti-spam policies, shared mailboxes, aliases, forwarding, connectors, distribution groups, retention, message tracing, and delivery troubleshooting.
- Harden cloud access through Conditional Access policies that require MFA, block unauthorized sign-ins outside the United States, preserve emergency-access accounts through controlled exclusions, and support approved travel through named locations.
- Configure Group Policy for security-group-based drive mapping, password controls, Windows Update, and department/location-based printer deployment; maintain a production logon script that maps shared resources for all users.
- Administer SentinelOne agents, policies, exclusions, alerts, endpoint isolation, remote commands, quarantine restoration, and investigations; conduct Microsoft 365 account-compromise response using session revocation, MFA reset, sign-in and audit-log review, and mailbox-rule/forwarding inspection.
- Configure Meraki firewalls, VPN, wireless SSIDs, filtering, and alerts plus Cisco access ports, trunks, VLANs, spanning tree, port security, PoE, firmware, and switch stacks.

SELECTED PROJECTS & RESULTS

Azure Virtual Desktop Engineering: Created and supported host pools, workspaces, application groups, session hosts, Entra groups, user assignments, networking, Conditional Access, monitoring, backups, and application deployments. Resolved a capacity issue affecting five users by expanding available compute capacity and correcting a stale resource assignment.

Backup & Recovery: Administer Veeam, Iron Mountain, and Azure Recovery Services Vault protection. Restored an isolated VM snapshot and recovered an uncorrupted 30-file Engagement binder within two hours before a tax deadline.

Nutanix Hyperconverged Infrastructure: Administered a Nutanix hyperconverged environment hosting approximately 15 VMs with 120 TB of usable storage through Prism Central and Prism Element; managed VM lifecycle, storage allocation, virtual and physical networking, snapshots, restores, alerts, firmware, and supported platform upgrades.

Security Incident Response: Analyzed a malicious client-supplied file in an isolated VM, confirmed attempted network discovery, and coordinated containment; separately traced a legitimate Lenovo update service quarantined by SentinelOne before restoring and excluding it.

Windows 11 / CCH Reliability: Remediated a compatibility issue affecting approximately 25 users, repaired endpoints, paused deployment through Group Policy, and directed the MSP to apply the broader change before deadline-sensitive work was disrupted.

Box-to-SharePoint Migration Planning: Lead architecture and migration planning for an in-progress 2.2 TB Box-to-SharePoint migration spanning Tax, Audit, Admin, and IT. Reduced source data from 3.4 TB through consolidation and five-year retention cleanup and designed layered department, VIP, partner, and client-access permissions.

TECHNICAL PROJECT - HOMELAB ENGINEERING

Designed and documented a production-minded self-hosted lab using Proxmox VE, Ubuntu, Docker Compose, Synology NFS, Pi-hole, Portainer, MeshCentral, and Uptime Kuma. Built Bash preflight checks to prevent containers from writing to local disk when NFS storage is unavailable, added health checks and SHA-256-verified configuration backups, and used GitHub Actions to validate shell syntax and Docker Compose.
