

JONATHAN DIAZ

SENIOR SYSTEMS ADMINISTRATOR | MICROSOFT 365 | AZURE | INFRASTRUCTURE

Miami, FL | 786-400-5936 | Diazjonathan6421@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub Homelab](#)

PROFESSIONAL SUMMARY

Hands-on systems administrator and IT operations owner with 4+ years of experience supporting 75 active users across the United States and India. Administers Microsoft 365, Entra ID, Active Directory, Azure Virtual Desktop, Windows Server, Azure infrastructure, networking, endpoint security, backup and recovery, and business-critical accounting applications. Directly builds and troubleshoots production systems while governing MSP and vendor work, reducing risk, and translating technical decisions into business outcomes.

TECHNICAL SKILLS

Microsoft & Identity	Microsoft 365 E3, Exchange Online, Entra ID, Active Directory, Group Policy, Conditional Access, MFA, Purview eDiscovery Standard, Content Search, retention, mailbox holds
Azure & Virtualization	Azure Virtual Desktop, Azure VMs, VNets, subnets, NSGs, Recovery Services Vault, Azure Monitor, Log Analytics, VM Insights, Network Watcher, Activity Log, Nutanix Prism Central/Element, Hyper-V
Windows & Infrastructure	Windows Server 2012/2019/2022, AD DS, DNS, DHCP, IIS, SMB file services, RDP, certificates, storage, patching, backups, disaster recovery, Veeam, Iron Mountain
Network & Security	Meraki, Cisco switching, VLANs, trunks, spanning tree, port security, PoE, VPN, Wi-Fi, firewall rules, SecureW2, RADIUS, Cisco Firepower, SentinelOne, BitLocker, Barracuda
Operations & Tools	PowerShell, Goverlan, ManageEngine Endpoint Central, Wireshark, IT Glue, MSP/vendor governance, procurement, licensing, documentation, CCH Axcess, Engagement, QuickBooks Enterprise, Karbon, Box

PROFESSIONAL EXPERIENCE

HLB Gravier LLP | IT Manager / Systems Administrator | Miami, FL | April 2022 - Present

Progressed from IT support and IT specialist responsibilities into full systems administration and sole internal IT ownership as scope expanded.

- Own day-to-day IT operations for 75 active users across Coral Gables and India, supporting approximately 75 Windows laptops, 15 servers, five printers, five Apple TV devices, and three conference-room systems; serve as the primary escalation point for major incidents.
- Administer approximately 15 Azure VMs - five AVD session hosts, seven application servers, two domain controllers, and one file server - including disks, storage, VNets, subnets, NSGs, domain integration, backups, monitoring, application installation, and resource optimization.
- Built and migrated seven production workloads to Azure, retired seven legacy VMs, and replaced one platform with SaaS; transitioned ongoing management of designated resources to the MSP after implementation and cutover.
- Administer Microsoft 365 E3 and Exchange Online for approximately 75 users, including transport rules, anti-spam policies, shared mailboxes, aliases, forwarding, connectors, distribution groups, retention, message tracing, and delivery troubleshooting.
- Created Conditional Access policies that block unauthorized sign-ins outside the United States, require MFA across cloud applications, preserve emergency-access accounts through controlled exclusions, and use named locations for approved international travel.
- Administer Windows Server 2012/2019/2022, Active Directory, DNS, DHCP, Group Policy, file services, IIS, service accounts, certificates, patching, and server troubleshooting; manage FSMO roles, replication, DNS zones, Sites and Services, trusts, and AD health checks.
- Configure Group Policy for security-group-based drive mapping, password controls, Windows Update behavior, and department/location-based printer deployment; maintain a production logon script that maps shared resources for all users.
- Administer SentinelOne agents, policies, exclusions, alerts, endpoint isolation, remote commands, quarantine restoration, and investigations; respond to compromised Microsoft 365 accounts using session revocation, MFA reset, sign-in review, mailbox-rule inspection, forwarding review, and audit-log searches.
- Administer Meraki firewall rules, VPN, wireless SSIDs, content filtering, and alerts; configure Cisco switching including access ports, trunks, VLANs, spanning tree, port security, PoE, firmware, and switch stacks.
- Direct MSP priorities through monthly service reviews, assign remediation work, validate completion, and coordinate approximately 20 software vendors, one telecom provider, and two hardware vendors; review contracts, renewals, proposals, invoices, and scopes for leadership approval.
- Maintain IT Glue documentation containing approximately 341 passwords, 76 documents, and 257 configurations, including network diagrams, inventories, runbooks, onboarding/offboarding procedures, recovery documentation, renewal calendars, and change plans.

SELECTED PROJECTS & RESULTS

Cost Reduction & Platform Retirement: Eliminated approximately \$128,400 in annual recurring technology costs by retiring Zscaler, Nutanix, Right Networks, and Duo after validating dependencies, migrating workloads, and completing decommissioning.

Nutanix / Hyper-V Infrastructure: Administered a standalone Nutanix appliance running Hyper-V with approximately 15 VMs and 120 TB usable storage through Prism Central and Prism Element; created and resized VMs, allocated storage, configured virtual and physical networking, managed local snapshots and restores, monitored alerts, and performed supported platform, firmware, and Hyper-V upgrades.

Azure Virtual Desktop Engineering: Created host pools, workspaces, application groups, session hosts, Entra groups, user assignments, networking, Conditional Access, monitoring, backups, and application deployments. Resolved a capacity issue affecting five users by increasing available hosts from 8 to 12 and corrected a stale resource assignment directly.

Box-to-SharePoint Architecture: Own architecture and migration planning for a four-site SharePoint environment covering Tax, Audit, Admin, and IT. Reduced source data from 3.4 TB to 2.2 TB through consolidation and five-year retention cleanup; designed department, VIP, partner, and client-access separation using metadata and layered Microsoft 365, Entra, and SharePoint permissions.

Backup & Recovery: Administer Veeam, Iron Mountain, and Azure Recovery Services Vault protection with daily schedules for Engagement and QuickBooks and weekly/monthly schedules for other workloads. Restored an isolated VM snapshot and recovered an uncorrupted 30-file Engagement binder within two hours before a tax deadline.

Security Incident Response: Analyzed a malicious client-supplied file in an isolated VM, confirmed attempted network discovery against other systems, and coordinated containment. Separately investigated a legitimate Lenovo update service quarantined by SentinelOne by tracing process activity and affected files before restoring and excluding it.

Microsoft Purview & Legal Holds: Supported three legal matters using Purview Content Search and eDiscovery Standard, including retention policies, mailbox holds, searches, and exports while maintaining confidentiality and leadership authorization.

Cloud Telephony: Built a new AT&T Office@Hand environment for approximately 65 users, including number assignments, one call queue, one auto attendant, receptionist routing, mobile clients, SSO, testing, three physical phones, and conference-room devices, avoiding a costly Avaya platform upgrade.

Windows 11 / CCH Risk Management: Remediated a Windows and CCH compatibility issue affecting approximately 25 users, personally repaired affected endpoints, paused deployment through Group Policy, and directed the MSP to apply the broader change before deadline-sensitive work was disrupted.

TECHNICAL PROJECT - HOMELAB ENGINEERING

Designed and documented a production-minded self-hosted lab using Proxmox VE, Ubuntu, Docker Compose, Synology NFS, Pi-hole, Portainer, MeshCentral, and Uptime Kuma. Built Bash preflight checks to prevent containers from writing to local disk when NFS storage is unavailable, added health checks and SHA-256-verified configuration backups, and used GitHub Actions to validate shell syntax and Docker Compose.
